

Reel: "A dollar that grows" (USD* explainer)

~40 seconds, vertical 1080x1920. Built to be rendered in reel-factory / Remotion. A demonstration piece, not official Perena content.

Goal: explain USD* to a non-crypto person in under a minute, in Perena's aesthetic, so well that Anna thinks "this person can make the hard thing simple, and ships."

Look and feel (Perena brand): warm, approachable, feminine, floral, anti-cyberpunk. Cream and soft botanical tones, old-money engraving and wave-pattern textures (echoing money prints), one clean serif for headlines and a quiet sans for captions. Gentle motion, petals and ink that bloom and settle. No neon, no charts flying, no hype. Calm equals trust.

Pacing: fast but not frantic. Cut roughly every 2 to 3 seconds, motion never fully stops, every line gets a snappy on-screen reveal. (Per the editing standard: instant hook, constant motion, kinetic captions.)

Audio: TV voiceover (warm, plain, unhurried), or a clean TTS placeholder for the draft. Soft, single instrument bed. Light "bloom" whoosh on each reveal.

Script and storyboard

#	Time	Voiceover	On-screen text	Visual
1	0.0-3.0	"Your savings account pays you almost nothing. You already know this."	almost nothing	A single coin sits still on cream paper. A wilting flower beside it. Quiet.
2	3.0-7.0	"And the second you spend the money, it stops working for you completely."	it stops working	The coin slides off-screen, the flower drops a petal.

#	Time	Voiceover	On-screen text	Visual
3	7.0-11.0	"USD-star is a different kind of dollar. You put dollars in, and you hold one simple token."	a dollar that grows	A seed drops onto the paper, a small green shoot rises. Title blooms in.
4	11.0-16.0	"Behind it, your money is spread across careful, boring, income-earning strategies. The kind a good bank would use."	spread, careful, boring (good)	The shoot branches into three calm stems, labelled simply: lending, real-world credit, market-neutral.
5	16.0-21.0	"So the token quietly grows in value. No staking, no farming, no twenty clicks. It just grows."	no farming. it just grows.	The stems bloom into flowers, the number on the token ticks gently upward.
6	21.0-26.0	"And here is the part banks can't do. You can still spend it. Send it. Move it. Anytime."	spend it. anytime.	The flowering token detaches and glides like a payment, leaving a soft trail.
7	26.0-31.0	"Your savings keep earning right up until the second you use them."	earning until you spend	Split image: one bloom being spent, the rest of the garden still growing.
8	31.0-36.0	"A dollar that grows while it sits, and works the moment you need it."	money that grows	Full bloom, warm, settled. The garden is full where the single wilting flower started.
9	36.0-40.0	"USD-star, by Perena. Where money grows."	USD* by Perena	Logo resolve on cream, petal settles, tagline. Clean end card.

Production notes

- **Total VO words:** roughly 105, which lands around 38 to 42 seconds at a calm pace. Trim line 7 first if it needs to be tighter.
 - **The one metaphor:** a wilting flower becomes a growing garden. It carries the whole idea (dormant money to money that grows) without a single chart. On-brand and legible to anyone's mother, which is the test Anna uses.
 - **Accuracy guardrail:** no specific APY or returns numbers on screen. "Grows" is the claim, not a percentage. Keep it honest and evergreen. Mention drawdown risk is out of scope for a 40s hook, but do not imply it is risk-free (avoid the word "safe").
 - **Build path in reel-factory:** nine scenes map to nine DemoConfig beats. Use the mock-UX kit only for scene 6 (a clean wallet send) so it grounds the metaphor in the real product for one beat. Everything else is motion graphics. Render locally, vertical first, then a 16x9 cut for the site.
 - **Voice:** TV records the VO in his own voice (warmer and more trustworthy than TTS, and it matches the leave-behind being personal). TTS only for the rough draft.
-

Why this asset wins: in 40 seconds it proves three things at once that no interview answer can, that I can make a genuinely complex product instantly understandable, that I build and ship in their own aesthetic, and that I am AI-native in how I produce. It is also something Perena could actually use.
